

Causal Pathways to Hypoxic Ischemic Encephalopathy (HIE): Detection, prevention and early intervention

This meeting was held at Chandos House, Royal Society of Medicine, London UK on 5 and 6 March 2013.

It was a very successful meeting attended by eighteen professionals from all over the world, including paediatricians, paediatric neurologists, neonatologists, obstetricians and gynaecologists. It was agreed that there should be co-operation rather than competition between different units and that the aim should be to eliminate neurodevelopmental disorders rather than reduce them. Continuity and collaboration were seen as the way forward. It is hoped that a publication will result from the meeting using the framework of the meeting as the basis for a book.
